

EWS Series The Standard of Whole Home Water Filtration and Conditioning Appliances

The Nation's #1 Whole Home
Filtration & Conditioning Appliance
Since 1987

EWS Water Filtration

- Imagine a bottled drinking water factory for your home.
- Better tasting, chlorine-free water; clean, healthy, quality filtered water to every faucet and tap throughout your home, every day.
- Healthier drinking and cooking.
- Healthier for skin absorption and inhalation from all other daily uses.
- Great for all-around usage; bathing, showering, steam, and sauna, providing healthier skin, hair and body systems.

EWS Water Conditioning

- EWS inhibits scale formation in pipes and water heaters.
- Provides an easier wipe off and clean up of water spotting than with untreated water.
- Uses less soaps and detergents than with untreated water.
- EWS is an environmentally safe, non-corrosive alternative to softeners that use sodium or potassium chloride.
- Nice clean feeling on your skin while bathing and showering without the "slick" feeling from salt-softened water.

EWS System

- Minimal system maintenance required; change out filtration (GAC) media and conditioning about every 7 to 10 years, based on local water conditions and usage.
- Automatic backwash using Proprietary Digital Valve Technology self cleans the filtration media and provides years of trouble-free operation - all using the power consumption of a doorbell.
- Installed at your main water service line to your home, providing high flow rates to accommodate almost any application.

Note:

- Applicable to most municipally-treated water, however, well water needs to be properly and completely tested before the specification of any filtration and treatment system(s).
- Any EWS System can be combined with EWS softeners (hot-side only) and/or additional EWS sink filtration product based on consumer preference or need, and/or based on the local water conditions.

The Easy & Correct Way To Select The Proper EWS Series System on Municipal Water or Well Water of Known Quality*

EWS-1354

EWS-1354

The most popular system sold.

For 3/4"-1" service line for moderate to high water hardness (250 mg/l or 15 grains or more).

EWS-1354-HF
